

Professional Background

- **Senior Software Engineer** at Q3 Technologies from January 2024 to March 2026.
- **Software Engineer** at Celebal Technologies Private Limited from June 2021 to October 2023.
- **Software Developer** at Shrewd Infotech Private Limited from September 2018 to December 2020.
- .Net Core Developer with 7+ years of experience in web application design, development and maintenance.
- Hands-on experience building scalable cloud-based integration solutions using Azure Integration Services.
- Experienced in designing secure microservices using OAuth2, JWT, Azure AD and Custom SSO.
- Experienced SQL optimization, API development and cloud-based integration.
- Hands-on experience implementing Clean Architecture for maintainable and scalable systems

Technical Expertise

- **Framework & Languages:** .Net Core, C#, MVC, and Angular(5-12)
- **Scripting and Markup:** jQuery, HTML, CSS, Bootstrap
- **Database:** SQL Server, My SQL and Azure Cosmos DB
- **Microsoft Technology :** Bot Framework, Graph API, Booking API, Azure SSO and Custome SSO
- **Azurae Integration Services:** App Service, Functions, Logic Apps, Service Bus, Event Grid, Storage Services, Azure APIM and Azure Application Insights
- **Tools :** MS-Teams, TFS (TFVC) and GIT
- **Open Source :** Keycloak and Kafka
- **System :** Windows, Linux & Ubuntu(For Remote)

Education

Lalit Narayan Mithila University (LNMU) Bihar, B.Com (A/C Hons) Jun 2016 with 63%

GNIIT In Software Engineering From NIIT (Preet Vihar, New Delhi), Diploma(3 year) .NET Technology with 9.5 CGP

Microsoft Certificate:

- Azure Fundamental (AZ-900)
- Azure Developer Associate (AZ-204)
- Power Platform Fundamentals (PL-900)

Professional Background

1. FirstGroup - Railway Ticketing Platform (Web, Android & iOS)

FirstGroup plc is a British multi-national transport group. Ticket booking Application

Project Tasks and Accomplishments :

- Worked on a large-scale railway ticket booking and account management platform for FirstGroup plc, supporting multiple Train Operating Companies (TOCs)
- Designed and developed .NET Core REST APIs and integrated third-party services using JSON and SOAP (XML) for bookings, ticketing, and customer data.

Environment :

- .Net Core, C#, Angular 15, SOAP XML, Azure Key Vault, Azure Function, Azure Message Queue, Event Grid and CMS

Responsibilities:

- API Development, Backlogs, Jira and Client Handling
- Azure Implementation

Project Timeline:

- Multi-year engagement (worked across multiple Train Operating Companies)

2. L&T ECC Approval

L&T Construction wants to develop a Teams based solution to make it easier for the managers to take actions on approval requests. The approval requests are currently raised and managed exclusively on their EIP system which has a web-based interface.

Project Tasks and Accomplishments :

- A Teams Based solution to solve the pain point of every manager in the system right up to the CEO.
- The solution will receive data, as events, from the source system on change of state in any approval request. It is the responsibility of the source system to push these events to our solution via Webhooks, either directly or via Azure Event Grid.
- To manage the bulk notifications of requests we will group them resulting in lesser notifications.

Environment :

- .Net Core, C#, SQL Server, Azure Key Vault, Azure Function, Azure Message Queue and Event Grid

Responsibilities:

- API Creation, Database Manage and Documentation
- Azure Setup (Storage, Application Insights)

Project Timeline:

- 2 Years

3. Shop LC (Web Application)

Redesigning and modernizing the Existing application for Shop LC, implementing a scalable, multi-tenant architecture with an enhanced web interface for improved user experience and accessibility

Project Tasks and Accomplishments :

- Worked on redesigning and modernizing an existing web application for Shop LC, focusing on scalability and improved user experience.
- Contributed to implementing a scalable, multi-tenant architecture to support future business growth and maintainability.
- Collaborated with frontend teams using ReactJS to ensure smooth backend–frontend integration.

Environment :

- .Net Core 6, C#, Azure Authentication and ReactJS

Responsibilities:

- API Creation, and Documentation
- Azure Setup (Azure Authentication, Backlogs)

Project Timeline:

- 1 Year
